

HOW TO CLEAN AND PROTECT YOUR RETAINER

- **IMPORTANT! When cleaning your appliance, never let it soak for more than 15 minutes. Always store it dry.**
- **Only use COOL water**
 - Regularly clean the retainer the same way you clean your teeth – with a toothbrush, toothpaste (NO whitening peroxide, baking soda, tartar control or abrasives) and COOL water. Hot water may dull the finish or warp the retainer.
- **Do not use effervescent denture cleansers, mouthwash containing alcohol or colored mouthwash**
 - Over-the-counter effervescent denture cleaners or alcohol can alter the color and damage and weaken the retainer. Using these products may void the warranty. Colored mouthwash will permanently stain the appliance.
- **We recommend DentaSOAK**
 - Gentle, effective, and easy to use, DentaSOAK cleans and destroys infection-causing bacteria – in just 15 minutes. DentaSOAK comes in a convenient three month, six month, and one year supply. Order DentaSOAK online at www.DentaSOAK.com.
